拨号VPS主机Centos7 系统拨号教程说明

文章作者：客服中心 文章来源：无极网络 发布时间：2017/6/19

拨号VPS主机Centos7.1系统拨号教程说明

第一步，请先运行：

```
/bin/systemctl stop NetworkManager.service
```

输入pppoe-setup出现以下提示

```
[root@localhost ~]# pppoe-setup
Welcome to the Roaring Penguin PPPoE client setup.  First, I will run
some checks on your system to make sure the PPPoE client is installed
properly...

Looks good!  Now, please enter some information:

USER NAME

>>> Enter your PPPoE user name (default ): 输入我们提供的ADSL账号
```

```
INTERFACE

>>> Enter the Ethernet interface connected to the DSL modem
For Solaris, this is likely to be something like /dev/hme0.
For Linux, it will be ethn, where 'n' is a number.
(default eth1): 直接按回车
```

```
Do you want the link to come up on demand, or stay up continuously?
If you want it to come up on demand, enter the idle time in seconds
after which the link should be dropped.  If you want the link to
stay up permanently, enter 'no' (two letters, lower-case.)
NOTE: Demand-activated links do not interact well with dynamic IP
addresses.  You may have some problems with demand-activated links.
>>> Enter the demand value (default no): 直接按回车
```

DNS 必须填入 否则不能上网

```
DNS

Please enter the IP address of your ISP's primary DNS server.
If your ISP claims that 'the server will provide dynamic DNS addresses',
enter 'server' (all lower-case) here.
If you just press enter, I will assume you know what you are
doing and not modify your DNS setup.
Enter the DNS information here: 114.114.114.114 填入DNS按回车
Please enter the IP address of your ISP's secondary DNS server.
If you just press enter, I will assume there is only one DNS server.
Enter the secondary DNS server address here: 114.114.115.115 继续填入DNS按回车
```

```
PASSWORD

>>> Please enter your PPPoE password:
>>> Please re-enter your PPPoE password: 输入两次我们提供的ADSL密码
```

QQ交谈

```
FIREWALLING

Please choose the firewall rules to use. Note that these rules are
very basic. You are strongly encouraged to use a more sophisticated
firewall setup; however, these will provide basic security. If you
are running any servers on your machine, you must choose 'NONE' and
set up firewalling yourself. Otherwise, the firewall rules will deny
access to all standard servers like Web, e-mail, ftp, etc. If you
are using SSH, the rules will block outgoing SSH connections which
allocate a privileged source port.

The firewall choices are:
0 - NONE: This script will not set any firewall rules. You are responsible
for ensuring the security of your machine. You are STRONGLY
recommended to use some kind of firewall rules.
1 - STANDALONE: Appropriate for a basic stand-alone web-surfing workstation
2 - MASQUERADE: Appropriate for a machine acting as an Internet gateway
for a LAN
>>> Choose a type of firewall (0-2): 输入0并回车
```

```
** Summary of what you entered **

Ethernet Interface: eth1
User name: 828xxxxxxx
Activate-on-demand: No
Primary DNS: 119.6.6.6
Secondary DNS: 114.114.114.114
Firewalling: NONE

>>> Accept these settings and adjust configuration files (y/n)?
```

设置完成后直接输入pppoe-start

可直接PING www.baidu.com 进行验证

如需停止拨号输入pppoe-stop

查看拨号状态和拨号后的信息输入pppoe-status
